

HANDLEBARS ARE IDEALLY MOUNTED IN A SPLIT, RELEASING TYPE BRACKET. THIS ALLOWS THEM TO BE TIED TO THE FRONT WHEEL WHEN TRANSPORTING THE BIKE (SAY) ON THE ROOF OF A CAR.

HANDLEBARS ARE IDEALLY LIGHTWEIGHT ALUMINIUM BUT A STEEL "RISER BAR" WORKS AS WELL. ALUMINIUM CLAMP ON BAR ENDS CAN BE USED AND THESE ALLOW EXTRA ADJUSTMENT.

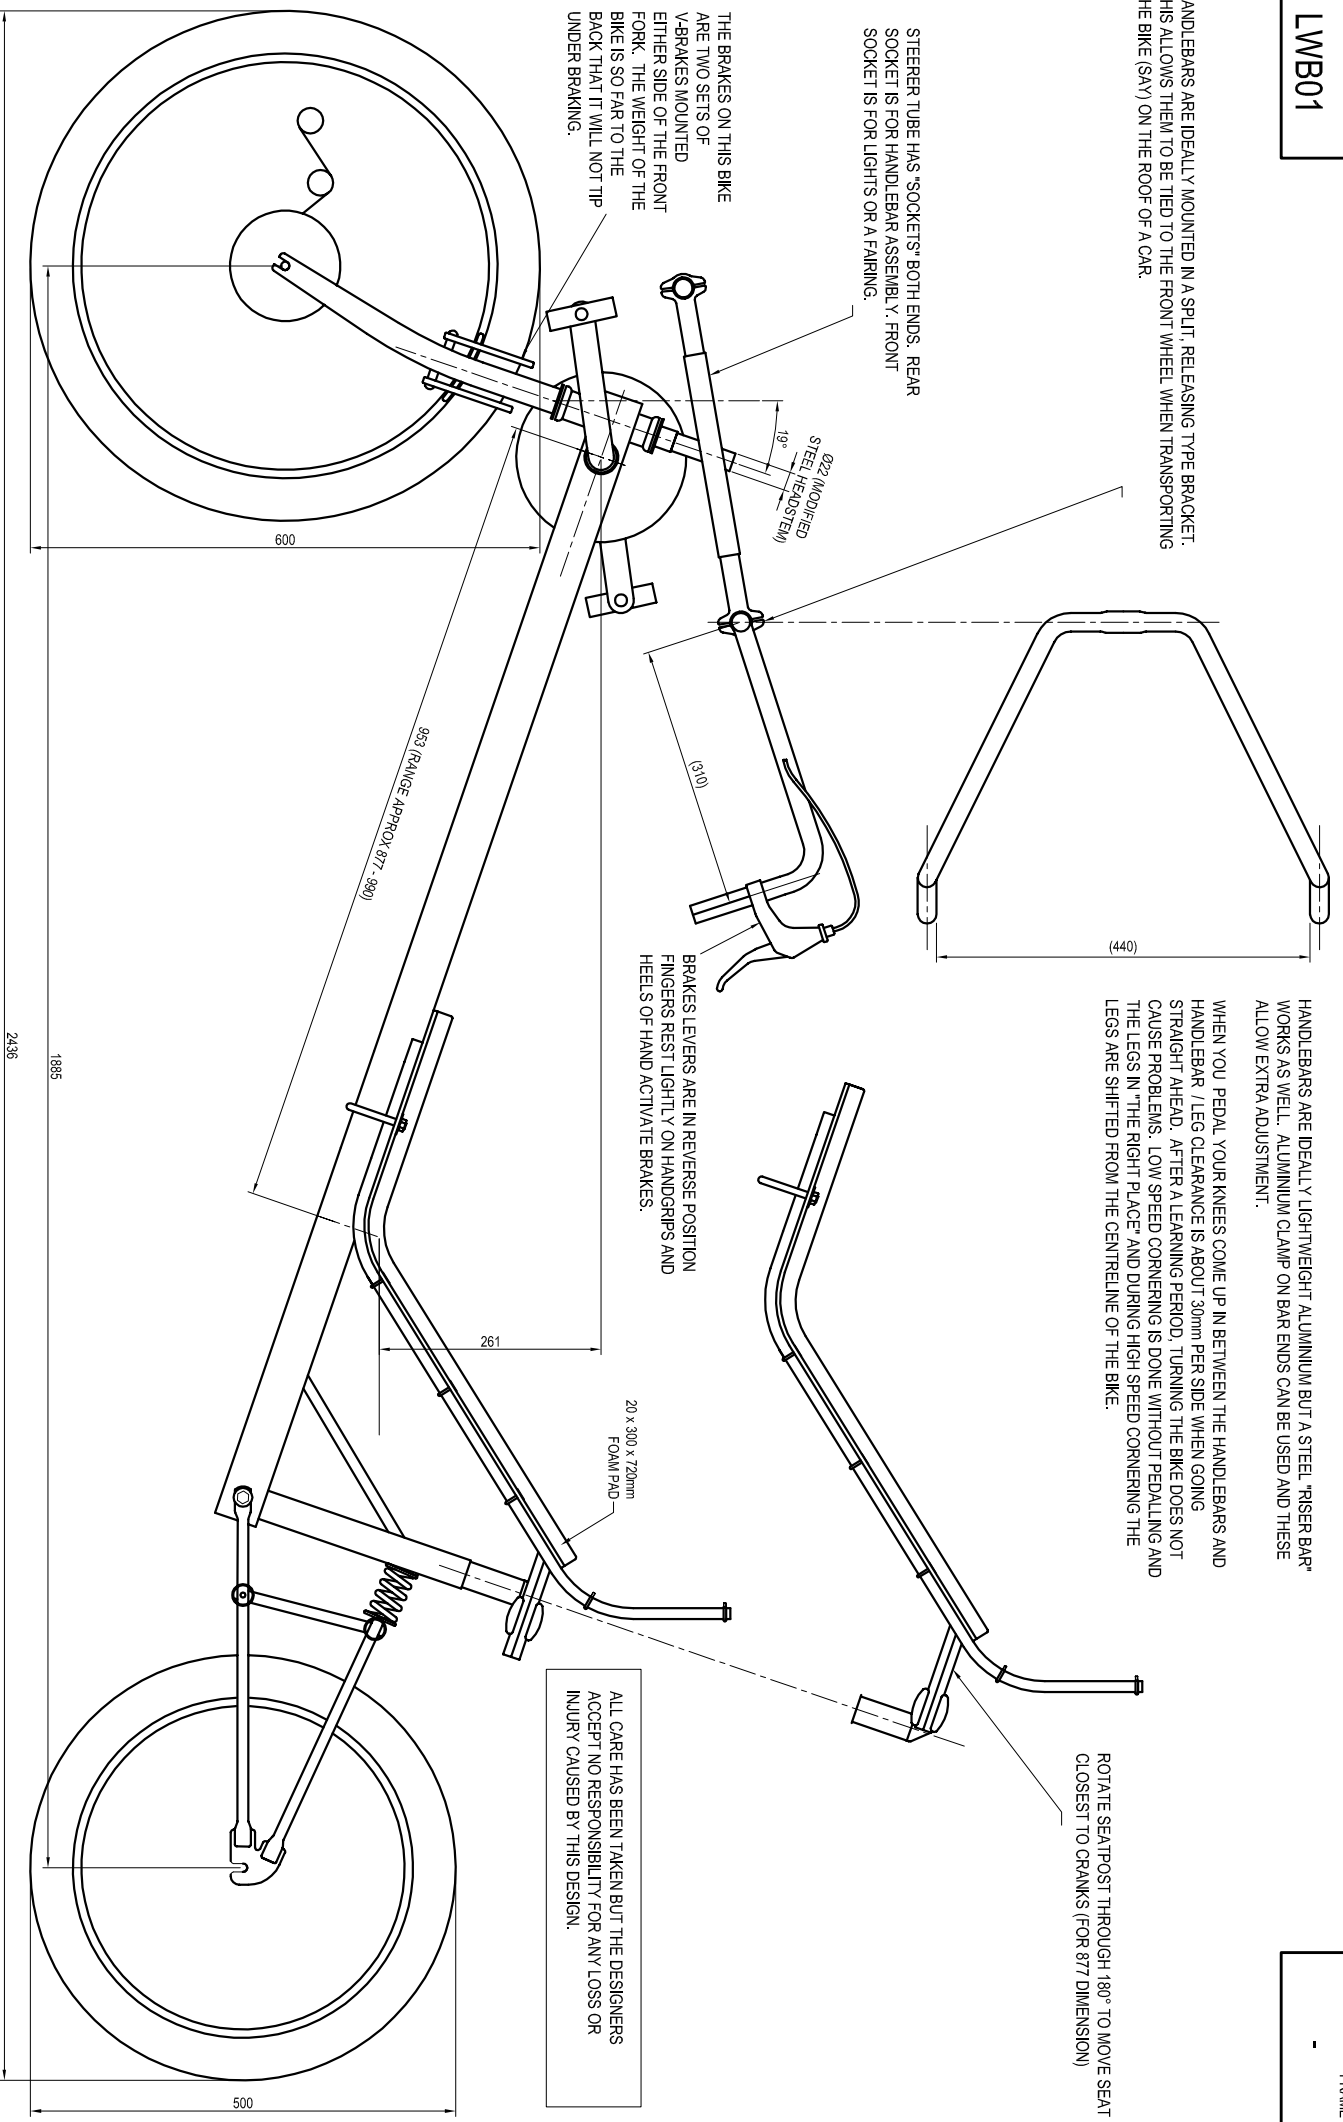

WHEN YOU PEDAL YOUR KNEES COME UP IN BETWEEN THE HANDLEBARS AND HANDLEBAR / LEG CLEARANCE IS ABOUT 30mm PER SIDE WHEN GOING STRAIGHT AHEAD. AFTER A LEARNING PERIOD, TURNING THE BIKE DOES NOT CAUSE PROBLEMS. LOW SPEED CORNERING IS DONE WITHOUT PEDALLING AND THE LEGS IN "THE RIGHT PLACE" AND DURING HIGH SPEED CORNERING THE LEGS ARE SHIFTED FROM THE CENTRELINE OF THE BIKE.

STEERER TUBE HAS "SOCKETS" BOTH ENDS. REAR SOCKET IS FOR HANDLEBAR ASSEMBLY. FRONT SOCKET IS FOR LIGHTS OR A FARING.

THE BRAKES ON THIS BIKE ARE TWO SETS OF V-BRAKES MOUNTED EITHER SIDE OF THE FRONT FORK. THE WEIGHT OF THE BIKE IS SO FAR TO THE BACK THAT IT WILL NOT TIP UNDER BRAKING.

BRAKES LEVERS ARE IN REVERSE POSITION FINGERS REST LIGHTLY ON HANDGRIPS AND HEELS OF HAND ACTIVATE BRAKES.

ROTATE SEATPOST THROUGH 180° TO MOVE SEAT CLOSEST TO CRANKS (FOR 877 DIMENSION)

ALL CARE HAS BEEN TAKEN BUT THE DESIGNERS ACCEPT NO RESPONSIBILITY FOR ANY LOSS OR INJURY CAUSED BY THIS DESIGN.
